

LOTTERY GAME METHOD

ABSTRACT OF THE DISCLOSURE

In a gaming method, player symbol data indicative of a plurality of sets of player symbols associated with a player may be received. Each player symbol is
5 selected from a plurality of possible symbols. An indication that the player submitted a wager associated with the plurality of sets of player symbols may be received. Winning symbol data indicative of a set of winning symbols from the plurality of possible symbols may be received. A value payout based on respective numbers of winning symbols in respective sets of player symbols may be determined, wherein for
10 at least some value payouts the value payout is different than a sum of a plurality of individual value payouts, each individual payout based on the respective number of winning symbols in the corresponding set of player symbols. Player payout data indicative of the value payout may be transmitted.
